

Our city has been becoming dirty due to the scattering behavior for garbage by crows.
Let's eliminate the damages caused by crows and make the city clean with the cooperation of the local community and our wisdom !

Let's stop crows from scattering garbage!

Combustible Garbage

Sakae 4-chome & 5-chome area:

put out your garbage at the designated site by 7:00 a.m. every Monday and Thursday !

3 Rules of Scattering Prevention

Rule 1

Strictly keep garbage collection time!

you can prevent crows and cats from scattering your garbage by observing the rules of collection days and times.

Rule 2

Hide food scraps with newspapers, paper bags, etc.

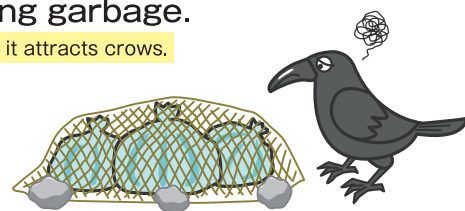

Crows rely on their visual sense, not smell when seeking garbage.

If there is something in the garbage bag that could look like food (red or yellow in color, etc.), it attracts crows.

Rule 3

Put a net over your garbage bag.

Weighting the net is also recommended!

The most powerful countermeasure against crows is

Garbage stations are made of stainless steel, aluminum, and plastic to physically keep crows away from garbage. Choose the best one suits your purpose, such as a fixed or a collapsible type depending on where you need them, such as household, condominium, or neighborhood association.

Collapsible Trash Station

Fixed metal trash station

- ★Garbage stations cannot be installed on roads (including sidewalks).
- ★Permission from the landowner is required for installation of the station on private property.

Sakae East (Sakae 4-chome & 5-chome) area aims to be a clean city with less garbage & crows!

The most important thing for all living and working in this area is cooperating with each other and abide by the rules for garbage disposal.
Less litter and crows will give a different impression of our city.

To prevent crow damage

① Reduce the amount of food scraps

Let's reduce the amount of food scraps by making efforts to reduce kitchen waste when cooking and by avoiding leftovers.

② Hide food scraps and put them out.

Wrap only food scraps in newspaper or paper bags so that the contents cannot be seen when disposing of them.

※Please do not cover the entire bag, but only the food scraps.

③ Use bird proof nets.

Cover the garbage bag with the net so that crows cannot touch the garbage.

※Please note that this would not be effective if the garbage bags were out of the net or were not weighted down properly.

④ Put out garbage on the morning of the collection day.

Crows are super early risers. If you put out your garbage the day before the collection day, your garbage will be highly likely to be the target of crows' scattering garbage.

In addition, cats or other animals may damage your garbage at night.

Please put out your garbage on the morning of the collection day.

**We would appreciate your cooperation
to protect our city from crows.**
